MARKETING RELEASE

INtools® Interface for Consolidated® SRVS6.2

The INtools® Interface add-on for SRVS6.2 is now available for download. This add-on enables PRV (Pressure Relief Valve) process data to be electronically transferred from Intergraph Corporation's INtools® software to SRVS6.2. Valves are sized based on the data and the results transferred back to INtools®.

Along with the add-on to SRVS, the download includes the following files which an INtools® user must have in order to work with the interface:

- **Dresser_RV.psr:** The custom-made Consolidated® PRV specification sheet which must be loaded into INtools®.
- **Dresser_RV.imp:** The custom-made import link that brings data back into INtools® from SRVS.
- **SRVS-INtoolsUserGuide.doc:** A manual that describes how to install the PSR and IMP, export and import data between INtools® and SRVS, and use the automated sizing in SRVS.

The files above are also available as a separate download for INtools® users who do not have SRVS or wish to pass their export data along to their local Consolidated® representative for sizing. If preferred, files may be e-mailed to ruth.chevallier@dresser.com. Consolidated will complete the PRV sizing and selection and return it to you for automatic import to your INtools database.

The interface is available as an upgrade to an existing installation of SRVS6.2, or as a full installation that includes the full SRVS6.2 program along with the interface. The interface-only installation will only work with SRVS version 6.2; previous versions of SRVS are not compatible. The files can be downloaded from the Dresser website via the following path: www.dresser.com > Brands > Consolidated > Valve Sizing Programs.

INtools is a registered trademark of Intergraph Corp.
